

Experiment in 25T superconducting magnet

- An electromagnet that can generate the highest magnetic fields as a cryogen-free superconducting magnet* is the 25T-CSM in Tohoku university. (*World record in 2020)
- We, Kohama-lab, used the 25T-CSM in the end of April.
- The quality of food around the Tohoku-univ is quite high. Tohoku-univ. is a good place! There is a progress in research, too.
