

Participation in LT29

Some of our group members participated in LT29 held in Sapporo from August 18 to 24. Miyake talked about the development and application of thermometers insensitive to magnetic fields. Tokunaga, Kinoshita, and Yamada gave poster presentations. In addition, one oral and seven poster presentations were made by our collaborators.

Because of the on-site event, many discussions were held between the presentations, and we could have a meaningful exchange of opinions for future research subjects. Please look forward to further development of our research in the future.
