

# Mr. Chen to be awarded Ph. D.

---

Mr. Qian Chen, a third-year doctoral student at Tokunaga Lab., has written his doctoral thesis on "Study of the magnetoelectric effect and the high field anomalies in spin-frustrated magnets  $\text{Fe}_2\text{Mo}_3\text{O}_8$ ", which was successfully accepted by the review board. He plans to return to China to work in a company. Mr. Chen has been integral to the Tokunaga Lab's activities for the past five years, including playing lunchtime football. We wish him all the best in his future endeavors.

Part of his doctoral thesis was published in Q. Chen *et al.* *Phys. Rev. B* **109**, 094419 (2024). If you are interested in this material's multi-step magnetization plateau and the corresponding gigantic magnetoelectric effect, please refer to this publication.
