

巖と大平が、SACLAへ出張実験に行ってきました。
電通大池田グループの皆さんと一緒に100テスラ粉末X線回折実験を行いました。
磁場誘起の構造相転移の観測を狙ったのですが、結果は果たして...!?

Gen and Ohira went on an experimental trip to SACLA.

Together with Prof. Ikeda's group at UEC,
we carried out a powder X-ray diffraction experiment at fields above 100 T.

We were aiming to observe a magnetic-field-induced structural phase transition,
but did we actually see it...!?
